Easily transfer data from your ultrasound equipment

FetView retrieves all images and measurements from your ultrasound equipment over the DICOM interface and displays them in a clearly structured layout. To the examination form can be easily added additional information and data. Click or use the touchscreen to zoom in on the images to show other functions. For example, you can choose which image should be inserted into the examination report, which image should be the title image, or if an image should be placed in an automatically generated presentation for the patient.

Effortless generation of growth curves and sketches

Take measurement data and produce easy-to-read growth curves with minimal effort. The application includes the results of all colleagues with whom you are working. This way everybody always has a complete overview of the child's development. The creation of sketches is helpful, e.g. to visually document the position of a finding during a mammography examination.

Customization of the examination forms

The examination reports can be customized at any time. Every doctor can, in line with their training and specialization, add extra measurements and details to their report. It's also possible to change the sequence in which the information is displayed.

Creation of a meaningful examination report

Once you have chosen your images, growth curves and sketches and added the relevant text, you can create a report in PDF format. This report can be printed out, shared online with the patient, handed to the patient and/or placed in her file.

Time-saving communication with the patient

You can easily and quickly communicate with the patient via the internal messaging system. Unnecessary phone calls are stopped and the communication with the patient is much more efficient.

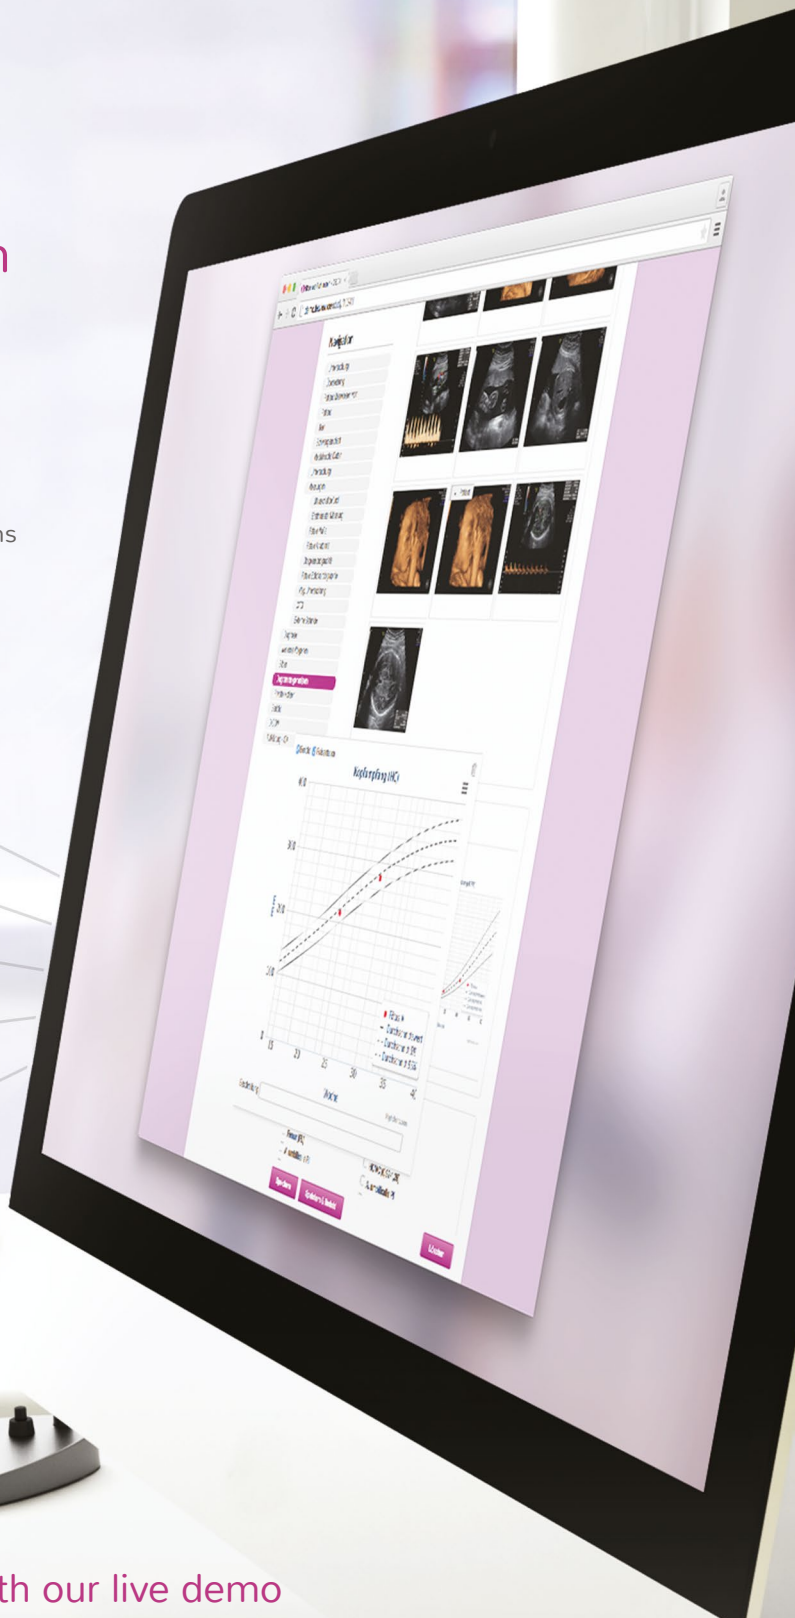

An online baby album as an additional service

All data can be shared with the patient online. You decide which data the patient has access to via her personal account so that, for example, she can copy or send images or start creating the baby's first album.

Innovative, versatile, easy-to-use – FetView is the ideal solution for documenting ultrasound examinations

With FetView you easily evaluate ultrasound studies and professionally document your results. As a web-based application, FetView is the convenient solution for physicians who can now have more time for their patients and who want to keep their costs for technology manageable.

Everything in one place

FetView bundles all test results, images, measurements and growth curves and stores them securely in a single location.

In real-time

FetView displays all test results instantly. Any problems can be dealt with immediately.

Comprehensive overview

FetView gives both doctor and patient a comprehensive overview of how a pregnancy is progressing.

Cooperation

FetView lets all doctors who are treating the patient view and edit documentation relating to a pregnancy.

We are an international team of dedicated engineers, physicians and scientists, who have developed a unique online service named FetView. Our many years of experience in information technology and in the field of OB/GYN enable us to be on the cutting edge of specific medical technology and be one step ahead with our services. Move ahead with us.

What others say about us

"FetView helps me with my job and makes it much more effective. I can freely structure the layout according to my wishes which wasn't available in my previous systems. I especially appreciate the opportunity to easily present the results. The feedback of my patients is fantastic!"

Dr. med. Berit Deiters, Consultant
Gynecologist and Obstetrician

"Through the intuitive usability it was very easy to integrate FetView into our daily work. My staff also quickly realized its benefits and has easily adapted to the program. I'm still very impressed with the regular updates to the system which result in a continual expansion of the program's functionality."

Dr. med. Wolfgang Hirsch
